Ok. Do will have a number people can call if their private drinking water well is impacted?

We're talking with Shaun right now. I've proposed to him the following:

Media Call - Lisa, I'll call in

Public availability this afternoon evening - just me, possibly IC but will depend on time.

Tomorrow public meeting in Durango

Public meeting in Silverton TBD - probably Monday

I'm working with Rebecca regarding setting up a regular calls for local officials and congressional staff. Not clear when those will start.

Shaun is supportive. If we have a public meeting and can speak to health impacts, land impacts, wildlife impacts would be good to have Deb and Dan Wall is already here. Libby

Libby, who from EPA do you have or need to support you in the sessions today?

Also, Region 9 is deploying folks, including one to Durango. I'll forward you a separate email about that.

Will be meeting with EPA OSCs this morning. There's already a suggestion for a public meeting again tonight and one in Silverton probably on Monday. After thinking about it more I'm going to propose that EPA have an availability session this afternoon into the evening followed by a public meeting tomorrow evening once EPA and everyone else has had a chance to digest the date and be prepared to answer questions. I can then get a better understanding of all the concern and questions out there and spend some one on one time with people which I've had a few requests for.

Question to you Deb. Can we have a lot more robust answers around health, livestock, recreational exposures, if any, by tomorrow night, if not sooner. Also, think it would be great if you could come down and present the information:)

Thoughts? Libby

Dan and I will be talking soon and will give you a more official answer. He is on his way to Durango. My initial thought is that this slug will not appreciably add to

precipitates that have previously deposited in the River sediments from historical mining activities.

Good news. Should include in the messaging this afternoon. Question I heard yesterday evening is what about contamination that may have settle in the sediment. Question was asked that when they step in the river it kicks up the sediment. How will that be addressed. Are there exposures?
